INFINITY APPLICATION CLIENT SETUP

****Before running, if your computer is Windows 7, Vista, or Server 2008, make sure that User Account Control (UAC) is disabled, or at its lowest level in User Accounts (User Accounts is accessed through the Control Panel.) After verifying that the UAC is set correctly, proceed with the following steps:*

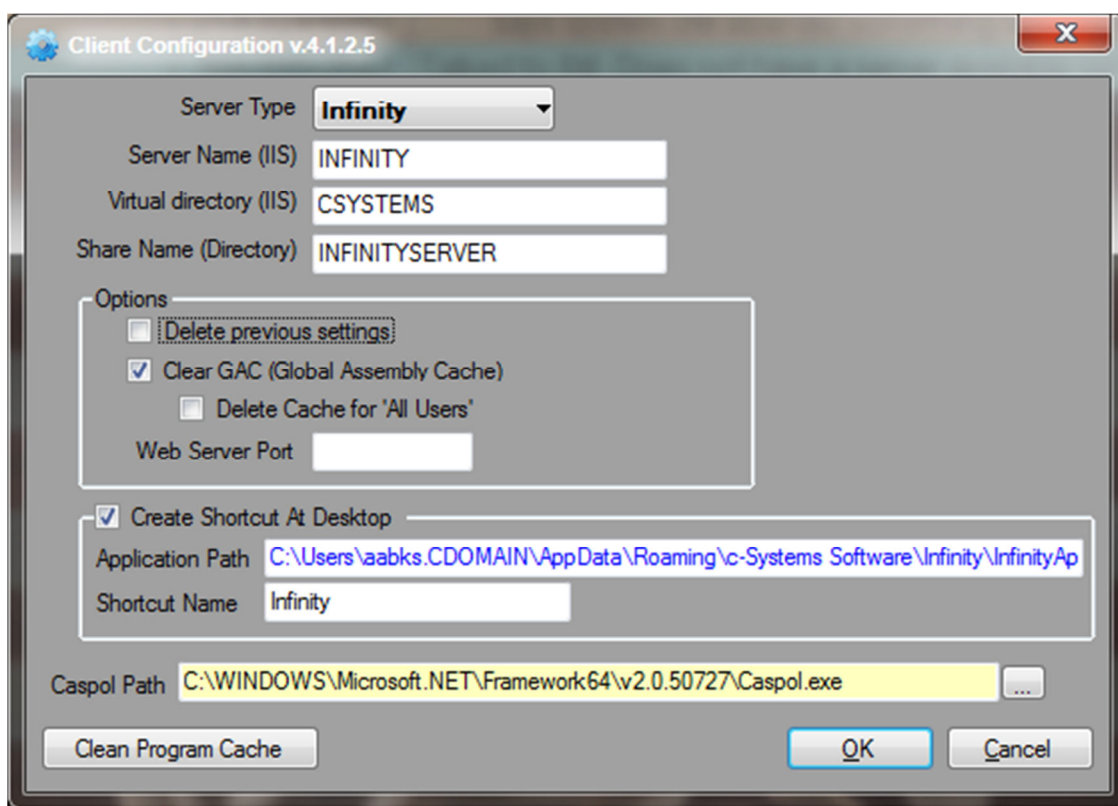

Open Internet Explorer, type this path into the address bar, and press enter.

http://infinitylogging.csystemssoftware.com/ClientSetup

*Requires the use of Internet Explorer as the browser for launching the program.
The client configuration will not run if launched through an alternate browser.

This link will launch the window below.

Change <SERVERNAME> (in the Server Name field) to the computer name of your INFINITY server.

For normal installations, no other options should be changed.

Click the OK button. This will install the necessary programs on your client pc.

*If the setup is ran before disabling the UAC, and Infinity will not run afterwards. Re-run the install with the Delete Previous Settings, and Clear GAC options checked.

Contact c-Systems Support at (817)649-3100 or support@csystemssoftware.com for assistance.
